Department of Computer Science and Engineering

MID SEMESTER EXAMINATION, Jan-June 2023

B. Tech: Semester-4

Course Name: Artificial Intelligence
Maximum Time: 2 hours

Course Code: CS44112
Max. Marks: 30

Instruction:

1. Attempt any three questions.
2. Assume any suitable data, if necessary.
3. The Marks, CO (Course Outcome) and BL (Bloom's Level) related to questions are mentioned on the right-hand side margin.

the right-hand side margin.																																												
1.	Find out about the Mars rover. A Mars rover is a motor vehicle designed to travel on the surface of Mars. It is expected to send the types of rocks and water on the surface. a) What are the percepts for this agent? b) Characterize the operating environment. c) What are the actions the agent can take? d) How can one evaluate the performance of the agent? e) What sort of agent architecture do you think is most suitable for this agent?	10	CO1	Understanding																																								
2.	Find a solution path in the following graph from Arad to Bucharest using the following algorithms. Which solution is optimal? You can consider two parameters i.e., number of states and total cost? a) Greedy best-first search algorithm [evaluation function: $f(n) = h(n)$] b) A* algorithm [evaluation function: $f(n) = h(n) + g(n)$]	10	CO3	Apply

4.	Define Production System. Develop a production system for the following problem. "The water jug problem: You are given two jugs, a 4-litre one and a 3-litre one. Neither has any measuring markers on it. There is a pump that can be used to fill the jugs with water. Develop a production system to get exactly 2 liters of water into 4-litre jug."
