

MID SEMESTER EXAMINATION,
Jan-June 2024
B Tech: Semester-VII

Course Name: Malware Analysis
Course Code: CS74183

Maximum Time: 2 hours
Max. Marks: 30

Instructions:

1. Attempt all questions.
2. Assume any suitable data, if necessary. (Any other instruction need to provide by the concern faculty)
3. The marks, Course Outcome (CO) and Bloom's Level (BL) related to questions are mentioned on the right-hand side margin.

		Marks	CO	BL
1	What is malware? Provide a definition and discuss the various types of malicious software programs, explaining their unique characteristics and methods of operation.	5	CO1	Creating and Understanding
2	Analyze the significance of malware analysis in the current landscape of cyberattacks. Evaluate the different types of malware analysis and their roles in understanding and mitigating threats.	5	CO2	Evaluating and Creating
3	Explain the concept of fingerprinting malware. Why is it important to uniquely identify malware families? Also list the tools used for fingerprinting malware	5	CO2	Analyzing and Creating
4	Explain the concept of file obfuscation and the reasons attackers employ it. Identify some commonly used tools for detecting obfuscation in malware binaries.	5	CO2	Remembering and Evaluating
5	Analysis of a hostile program (malware) requires a safe and secure lab environment, as you do not want to infect your system or the production system. Briefly explain how you would set up a lab environment for malware analysis.	5	CO3	Applying and Remembering
6	Explain briefly in respect of malware analysis: a) File Signature. b) Worm c) Packers and cryptors d) Dynamic Link Libraries(.dll) e) Ransom ware.	5	CO2 CO3	Remembering and Evaluating. Applying and Remembering
